# Nova AI Training Portal: version 1 go-live

What must be done, and what must be decided, before the first release to customers

**Where we are.** Every item in the Dev To-Do (BRD v2.3) and in Mehar's 12 November update is built, merged and live at virtual-training-demo.vercel.app, with 1,812 automated tests passing. The portal is ready for the UAT round on 13 November, once the setup in section 4 is done. It is not yet ready to launch to customers: the infrastructure the to-do itself lists as "before go-live" is not in place, three approvals and some content are outstanding, and a few things are built but not yet proven in use.

**Recommendation.** Run UAT as planned. Treat its findings, together with sections 1 to 3 below, as the go-live list. Call it version 1 once the paid database plan, backups, the approved privacy notice and the deck approver are in place and the UAT findings are fixed.

## 1. Must be done before version 1 (blocking)

| Item | Why it blocks launch | Owner |
|---|---|---|
| **Move Firebase to the paid Blaze plan** | On the free Spark plan the database allows 50,000 reads a day. On 12 November testing used it up and nobody could sign in for over an hour. Usage has since been cut sharply, but a busy day with real customers can still reach the cap and lock everybody out until it resets at 13:30 IST. Blaze removes the cap; at this scale it costs very little. | Piyush (cost approval) |
| **Database backups (NFR-7)** | The to-do requires that at most a few minutes of data can be lost and that service is restored within one working day. Firestore backups or point-in-time recovery need Blaze. Keep backup retention at 30 days or less so deleted personal data ages out (AI-41). | Piyush |
| **Uptime monitoring, and Vercel Pro (NFR-5)** | 24x7 availability with monitoring is a go-live requirement. Vercel Pro also allows the notification job to run every few minutes rather than once a day. | Piyush (cost approval) |
| **Email service (AI-35)** | Create the Resend account, verify a sending domain (for example mail.technavious.com), and set RESEND_API_KEY and NOTIFY_FROM. Until then notifications are kept, not sent. | Piyush |
| **Approve the privacy notice (AI-27)** | Every user is shown "Draft notice, awaiting approval". The final wording is Prashant's; then the notice version is updated and everybody agrees once more. | Prashant |
| **Name the deck approver (AI-39)** | Set DECK_APPROVERS to Srikant's address. While it is empty any Technavious administrator can approve. | Srikant / Piyush |
| **Fix what UAT finds** | Mehar's test cases from the AI-24 notes decide the rest of the list. | Dev team |

## 2. Decisions needed

*Each was built one way so that work could continue. They need confirming or changing before launch.*

| Decision | As built now | Who decides |
|---|---|---|
| **Database plan** | Free Spark plan, with usage cut down. Recommended: Blaze before launch. | Piyush / management |
| **Who sets up trainer-led sessions** | Administrators only. Facilitators run, mark attendance, cancel and close their own, but cannot choose participants, which would let them read anybody's profile. | Mehar |
| **Who may close a session** | The facilitator and any administrator. The to-do says the facilitator only. | Mehar |
| **Rounding of scores** | Levels use the whole percent shown, so 70.6% shows as 70%: Intermediate. | Mehar |
| **Late join** | Anybody marked present after the first hand-over shows as Joined late. A grace period may be wanted. | Mehar |
| **Pre-session assessment once the session starts** | Stays open to each person until they are marked present; the post-session steps open only to those marked present. | Mehar |
| **Cancelled sessions** | Shown as Cancelled on participants' homes, not hidden. | Mehar |
| **Company administrators and decks** | They see published decks read-only, assign them, and may run a published deck without being assigned it. | Mehar |
| **Retention** | Restricted 90 days after the last session; profile and answers deleted at 1 year; the rest at 5 calendar years. Participants cannot see their own restricted record. | Mehar / Prashant |
| **Audio retention by the provider** | Every transcription opts out of Deepgram's model-training programme, which forgoes its discount (DEEPGRAM_MIP_OPT_OUT). | Piyush |
| **Rate limits** | Counted per server rather than shared, to save database use on the free plan. With Blaze, RATE_LIMIT_STORE=firestore restores shared counting. | Piyush |
| **Notifications** | Kept 30 days, so held emails older than that are dropped; the incomplete-profile digest repeats daily while somebody stays incomplete. | Mehar |
| **Lesson plans and white papers** | Lesson plan sections are matched to slides by shared words (correctable with slide numbers); a timing gap is flagged at 25% over or 15% under. White papers use the deck approver rule; any Technavious administrator may attach them. | Mehar |

## 3. Waiting on content and approvals

| Item | What is needed | From |
|---|---|---|
| **Feedback questions (AI-31)** | Benchmark's own questions. Placeholder ratings of 1 to 5 are used until then. | Srikant |
| **Glossary (AI-21)** | The definitions of CDFA and HV/MV, added on the Glossary page, and a decision on the six held definitions. | Glossary owner |

| Item | What is needed | From |
|---|---|---|
| **Case study white papers (AI-19)** | The case studies converted into white papers with brand names removed, checked and approved. The upload and approval screens are ready. | Srikant / owners |
| **Lesson plan (AI-43)** | Benchmark's real lesson plan. The feature is tested with a sample. | Benchmark |
| **Question banks** | Final pre- and post-session questions for each deck. Labelled samples are in docs/uat/samples. | Content owners |
| **Languages (AI-12, AI-15)** | Sign-off of each language before customers see it (LANGUAGES_FOR_EVERYONE). | Shafi |

## 4. Settings and setup

| Setting or task | Purpose | Status |
|---|---|---|
| **Approve each deck to be used** | No deck can be assigned or run until approved on its deck page. | Before UAT |
| **Facilitator test accounts** | Added on People by an administrator; each sets a password with First time here? | Before UAT (Mehar) |
| **A customer organisation and its company administrator** | For the company administrator and cross-company tests; created with npm run provision-org. | Before UAT |
| **CRON_SECRET** | Switches on the daily retention and notification jobs. | Before UAT |
| **Firestore TTL policies** | On expireAt for audit, platformAudit and notifications, so old entries are deleted. | Before launch |
| **GitHub dependency alerts (AI-25)** | Switch on. Four moderate findings remain inside Google's Firestore library and need an upstream fix. | Before launch |

## 5. Measured, and still to prove in use

| Item | State |
|---|---|
| **Response times (AI-44)** | Met on the live site on 12 November: slide starts 10 of 10 within 3 s (median 0.10 s, with the next slide prepared ahead), answers 10 of 10 within 5 s (median 3.24 s, slowest 4.52 s). |
| **The first slide of a session** | Took 8.9 s on the live site (about 4.5 s locally), most of it the AI writing the welcome, which cannot be prepared ahead. Outside the 9-in-10 measure of slide changes, but noticeable; to be looked at. |
| **International languages (AI-15)** | Built and marked in testing; a full session in each language for staff is still to be run. |
| **Facilitator screens** | Tested with an administrator acting as facilitator; not yet with a facilitator account. |
| **Groups and uploads of 50 (AI-01, AI-28)** | Covered by automated tests; to be tried with 50 in UAT. |

| Item | State |
|---|---|
| **Voice drop-outs on a slow network (AI-10)** | The player waits and carries on rather than restarting; not re-tested on a slow network this round. |

*Fixed on 12 November from live testing: a question could jump the session to its last slide and end it; the microphone stayed on after a session wrapped up; sign-in failed when the free database allowance ran out, and the app now uses far less of it and says so clearly when it cannot sign anybody in.*
